SashSense Duo

Find the hoods that stay open after nearby activity stops.

SashSense Duo is shipping. A primary sensor and a wireless activity companion put sash position and recent motion on one hood timeline. Facilities teams can use that record to decide which hood to visit and when.

Product rendering of the primary and activity companion.

From the hood to a facilities decision

Measure the sash

The primary reads a magnetic closure switch and optical range. The companion sends recent motion by Bluetooth. The primary uploads both signals over Wi-Fi.

Review the interval

The dashboard shows per-hood history and data coverage. Export the observations to CSV or use weekly and quarterly reports. Use a measured building airflow point for an airflow comparison.

Commission on site

Mount one pair, connect it to a site-approved 2.4 GHz Wi-Fi network, then compare fresh readings with witnessed sash movements. Motion indicates activity near the sensor. The hood’s installed alarms and ventilation controls remain in service.

Price a one-hood system

$229.99

Duo hardware per hood

$42 / month or $378 / year

Dashboard access per hood at the 1–9 hood rate

One system with one prepaid year totals $607.99 before tax and shipping. Dashboard access starts at activation and renews manually. MSA quotes on-site work separately.

Request an invoice or quote with the hood count, site and preferred term.
